

Mainpac Mainview

mainpac
appreciate your assets

As part of our continuing 'value-add' functional enhancement strategy we have recently incorporated an executive reporting (EIS) facility into the Mainpac suite of modules.

Mainview is a KPI based monitoring facility operating across the various Mainpac functional areas and is presented in a highly visual format, introduced for logical altering and analytical purposes.

"View" categories with available predefined KPI libraries include:

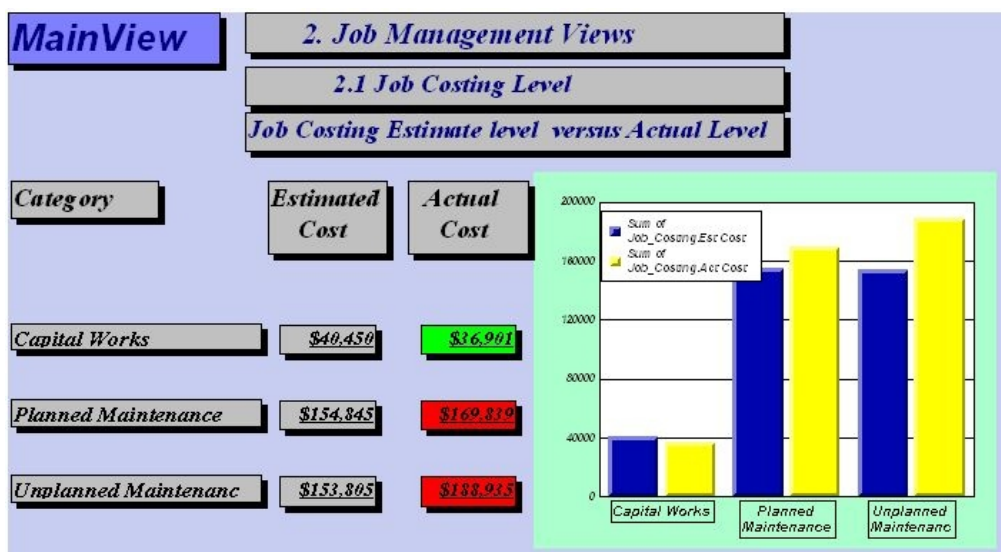

- Planned and Preventive Maintenance
- Job Management
- Purchasing Management
- Inventory Management
- Plant Reliability Management
- Financial Management

What are the benefits of Mainview?

- Be able to obtain a "snapshot view" of performance in key areas!
- Be quickly alerted to emerging adverse trends before they cause further costly damage!
- Be able to "drill-down" through various levels to underlying Mainpac data to determine variation causes!
- Utilises existing Crystal Reporting capabilities!
- Communicate "visually" and effectively with all levels of your organisation!

How does Mainview work?

Relevant key performance indicator (KPI) sets are developed for each of the functional areas, linked to the underlying Mainpac application data tables and presented in a combined graphical reporting "view" format with attached component drill-down facilities.
