Product **Mainpac**
Version **Mainpac Enterprise 4.0.4**
Release Date **12/07/2010**

If you have any issues or problems with this release, contact the Mainpac Help Desk on 1300 MAINPAC (Australia), +61 8 8431 9818 (Int.) or email Help@Mainpac.com.au.
All issues below have been addressed and tested in line with Mainpac Pty Ltd's usual development and quality processes.

General

The Storekeeper Work List (menu options Inventory > Storekeeper Work List) now has two open grids. The Returns and Issues grids can be "opened" so that all records can be edited one after another. Click on the pencil icon to edit then use tab to move between fields/records.

Inventory

The Stock Type on the Parts Catalogue record now defaults to blank. The field remains mandatory, meaning the record cannot be saved unless a valid entry is made. This prevents Parts Catalogues being accidentally saved using the wrong Stock Type.

The Recommended Items grid has been improved to include the Parts Catalogue description for each item.

The Storekeeper Work List grids have been enhanced to allow in-line editing, where all grid lines are displayed in edit mode. This allows multiple records to be edited sequentially by tabbing between fields/records.

Purchasing

Purchase order line items have been enhanced. When updating details:

1. If any of the Qty Ordered, Unit Price or Tax Rate are edited the screen is dynamically updated to show the new Total Price (next to Unit Price) and the new Tax Rate.
2. The Tax Rate shows the historical value. If any of the three fields above are modified, the Tax Rate is updated to show the current tax rate (if changed).
3. The tax rate description displays alongside the Tax field.
4. If the order's currency is different from the operational view's currency, the Total Price is displayed in both local and foreign currencies. Otherwise it is displayed in the local currency.

Purchasing has been enhanced for faster data entry and purchase order processing. If multiple requisition lines are selected on the Buyer Work List and the Assign to Draft grid action selected then:

1. Mainpac displays a lookup grouping requisitions by supplier, currency, buyer group and destination warehouse.
2. Above each group is a lookup that shows only those purchase orders with the same characteristics as the requisition lines. If an order is selected, the requisition lines will be added to that order.

The grid filter on the Requisition Work List when in Tracking view has been enhanced. The filter now includes drop down lists of statuses for Status and Order Status criteria.

To prevent inaccuracies during stocktake, receipts cannot be committed for items that are currently under stocktake.

The Receipts grid filter on the Receipts Work List now includes Receipt Status in the filter criteria.

To assist with identification of items under inspection, the Inspection Work List now includes the Supplier Description, Order Number and Order Line Number.

Work Orders

In Work Order Request, the Email Address, Phone and Requested By fields are now populated with details from the Labour Resource linked to the logged on user's record.
